

CSS-Styled Bio Page

Instructions:

- Put all of this code inside a folder named `week1-day2-html-css`, and put the folder in a place where you normally code.
- Use the command line to make a folder called `css`.
- Use the command line to make a file called `style.css` inside of the `css` folder.
- Reference the `style.css` in your `student-bio.html` file. You do this by placing `<link rel="stylesheet" type="text/css" href="css/style.css">` inside the `<head>` tag.
- Style the example on the projector.
 - Add a class called "container" on the `div` tag.
 - Add an id called "main-bio" for the first section tag.
 - Add an id called "contact-info" for the second section tag.
 - Add an id called "bio-image" for the bio image.
- Style specs:
 - `body`
 - The background color is `#efeee7`.
 - The font used "Georgia", Times New Roman, Times, serif;.
 - The font color is `#333333`.
 - Be sure to zero out the body margins and padding so the page is flush to the top of the page:

```
body {  
    margin: 0;  
    padding: 0;  
}
```

 - `header`
 - The background color is `#333333`.
 - `h1`
 - The font color is `#eee`.
 - The font size is 28px.
 - Look at the example on the screen, and eyeball the padding and/or margins and positioning of the text.
 - `h2`
 - The font size is 24px
 - Make the container have a width of 1024 pixels, and center it. You do this using `margin: 0 auto;`.
 - Make `#main-bio`, `#contact-info`, `#bio-image` all `float: left`.
 - Make the `#bio-image` have a width of 200 pixels.
 - Be sure to include alt text in all images
 - `#main-bio` should have a width of 70%.

- Add margins to the image so there is distance between it and the bio text.
- #content-info should have a width of 30%.
- Adjust the line height so it is 1.5 times the size of the font.
- Make the link color #d21034.
- If you forgot how to write the CSS properties, you can reference all CSS properties here <https://developer.mozilla.org/en-US/docs/Web/CSS/Reference>
- Bonus:
 - Stage, commit, and push this new file to Github.
